Object: Information report on Regulation no. 1907/2006/EC REACH

The organic matrixes Agrogel® and Gelamin®, just like the other plant-derived extracts/hydrolizates produced by us and used in the formulation of our organic and organo-mineral fertilizers, meet the requirements set by the REACH Regulation, since they can be classified as natural polymers undergoing a hydrolysis process.

For the purposes of the REACH Regulation, therefore, they should be considered as chemically modified natural polymers exempt from titles II (registration) and VI (evaluation), as defined in articles 3(5) and 2(9) of the aforesaid Regulation.

The foregoing is confirmed in the document in our possession and available to the Control Authority in the case of verifications, which was written up jointly with Federchimica's CentroReach by the 'Gruppo Idrolizzati Proteici' (Protein Hydrolizate Group – Translator's Note) to which Ilsa belongs.

Our compliance with the REACH Regulation regarding the other raw materials used for the formulation of our fertilizers has been previously subject to an audit by our suppliers.
